VINCENZO GRECO

Email: vincenzo.greco@dfa.unict.it

Office: Department of Physics and Astrophysics, Building 6, Room 346

Telephone: +39 095 3785403

Reception hours: send an e-mail to vincenzo.greco@dfa.unict.it

Program of the course:

Basic ideas and concepts of Strong Interactions: asymptotic freedom and confinement. Quantum ChromoDynamics (QCD) a general overview: perturbative and non-perturbative regimes. Chiral symmetry phase transition. Parton model: distribution functions and basic properties.

QCD phase diagram of nuclear matter at finite density and temperature. Relativistic gas and bag models. Equation of State of the quark-gluon plasma and its transport coefficients. Basic thermodynamics and fluid dynamics of the phase transition from hadronic matter to the Quark-Gluon Plasma (QGP). Applications to Early Universe and Neutron stars. Impact of the QGP in the expansion of the Early Universe and in the evolution of ultra-relativistic collisions. Relativistic pp, pA, AA collisions at ultra-relativistic energy.
